

# W&W Manufacturing IIIA Battery Analyzer Conditioner

## W&W IIIA Analyzer

**A W&W Battery Analyzer/Conditioner** is a desk-top device which charges and discharges a battery. During the discharge process it evaluates the battery capacity which is shown in display. It conditions the battery by repeating charge and discharge cycles. The charge and discharge rates are tailored in hardware-programmed adapter cups, which are unique for each battery. All these features are controlled by a single push button.

**SINGLE BUTTON OPERATION:** Initiates all modes of operation.

**INDEPENDENT CHARGE RATES PER CUP:** Independent charge rates, all of which are cup or adapter selected and do not require a computer or operator interface (dependent on battery specifications)

**INDEPENDENT DISCHARGE RATES PER CUP:** Independent Discharge rates, all of which are cup or adapter selected and do not require a computer or operator interface (dependent on battery specifications)

**INDEPENDENT CHARGE & DISCHARGE** rates allows the batteries to be properly analyzed and conditioned, unlike other analyzers that can only address a very limited number of batteries, due to having only one charge and one discharge rate

**ADAPTER CUPS:** A large variety of adapter cups are available that are completely interchangeable, requiring no tools to change from one adapter cup to another. You have your choice of the first set of cups at no extra cost, as determined by the model analyzer you purchase

### BATTERY CHEMISTRIES:

Nickel Cadmium,  
Nickel Metal Hydride,  
Lead Acid  
and Lithium Ion

**AGENCY APPROVALS:** UL, CSA, CE, TUV

**The A series conditioner analyzer comes in a one cup, three cup and six cup unit.**

**IA (1 place) MSRP: \$409**

**IIIA (3 place) MSRP: \$649**

**VIA (6 place) MSRP: \$1295**

## Universal Battery Adapter

A truly universal adapter for NiCd and NiMH batteries only. All one has to do is connect the "UNIVERSAL ADAPTER" as though it was a typical battery cup. There are three rotary switches and a molex connector mounted on it.

**An RS232 serial port** allows easy access to Personal Computers with Windows 95,98, 2000,NT4.0 (with service pack #6) and Windows professional.

MSRP: \$225
